1973 - Siemens Elmiskop 102

125 kV - 2.5 m, 1.5T

3 MV

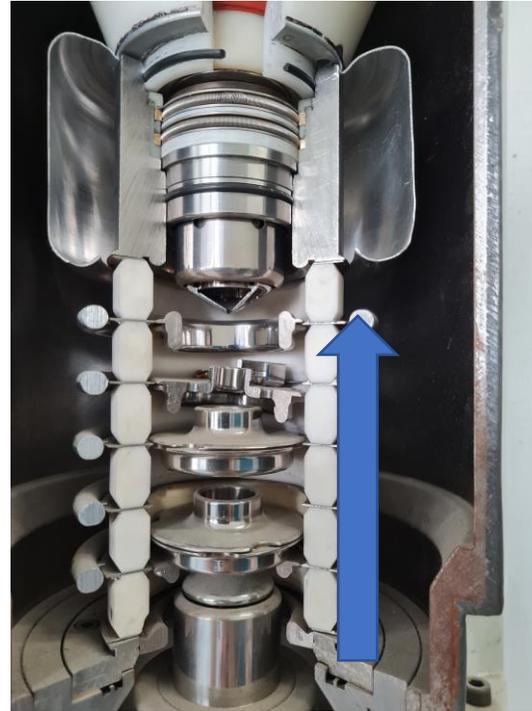

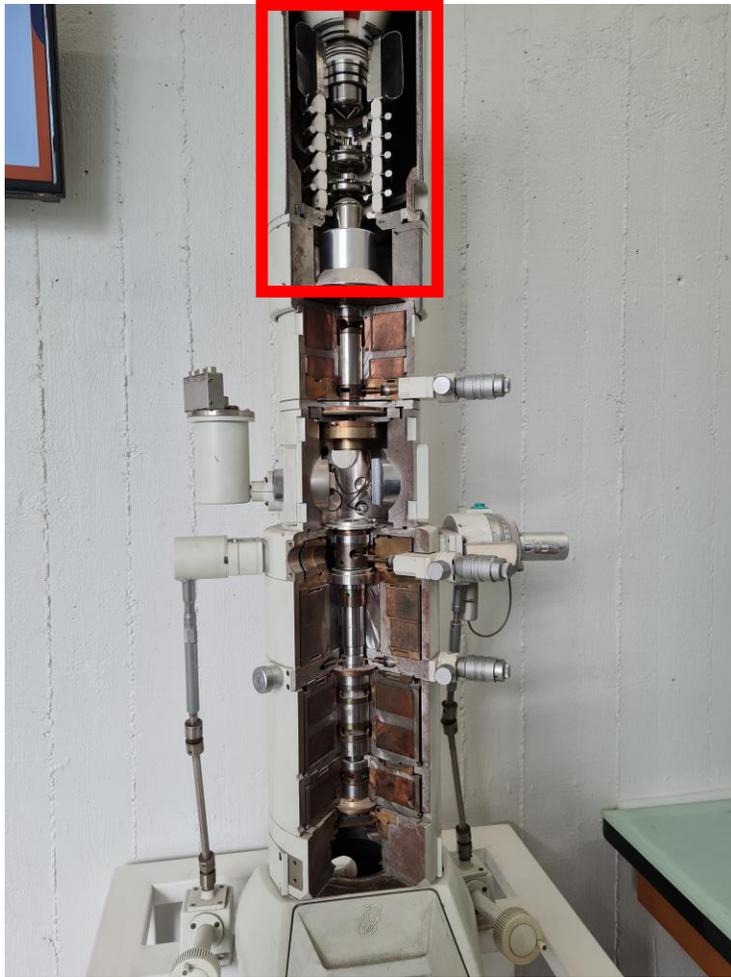

~2000

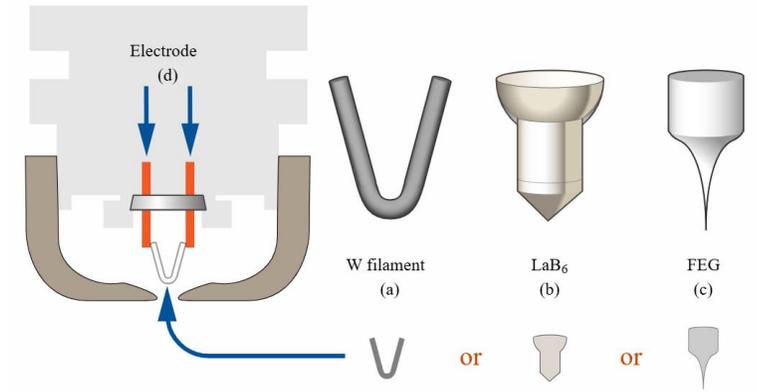

100 à 200 kV

~2020

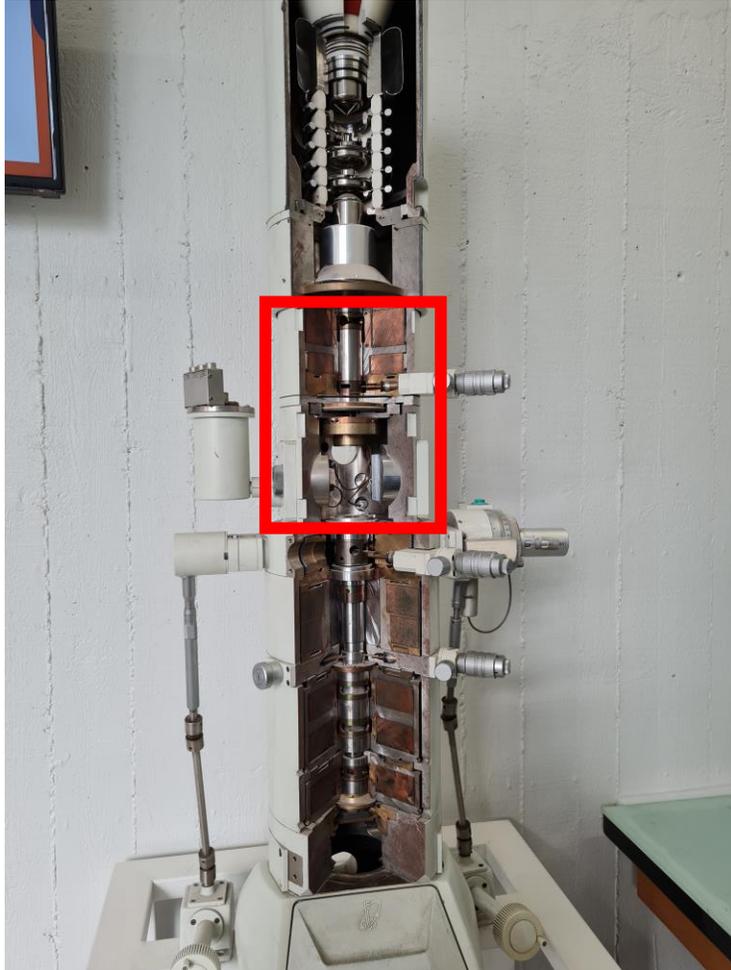

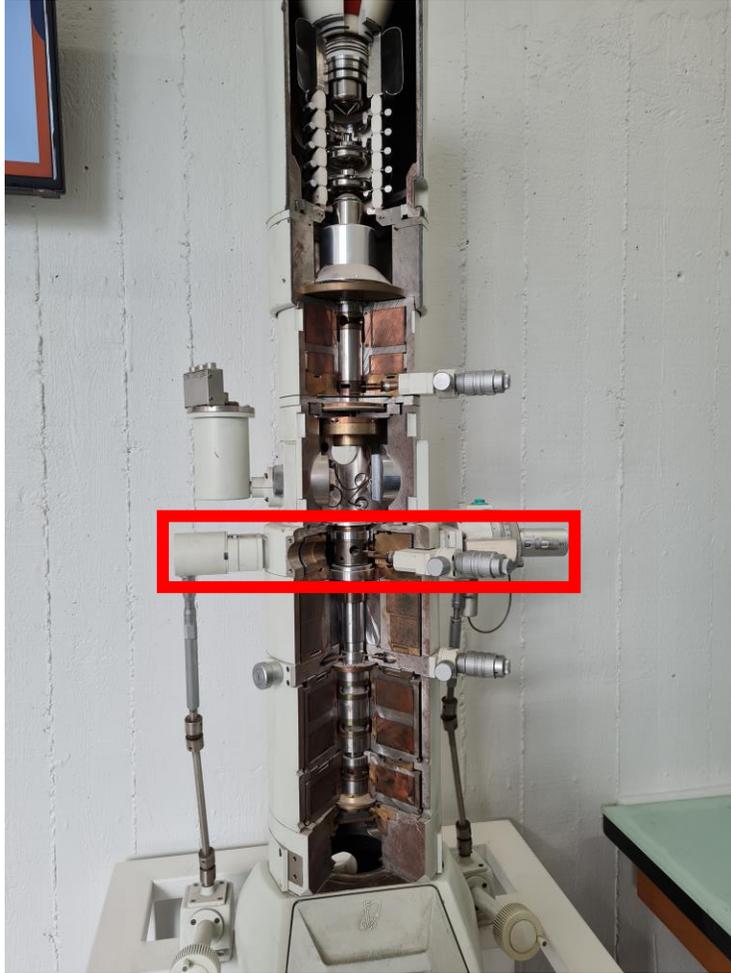

Tension d'accélération 200kV

Les différentes sources d'électron

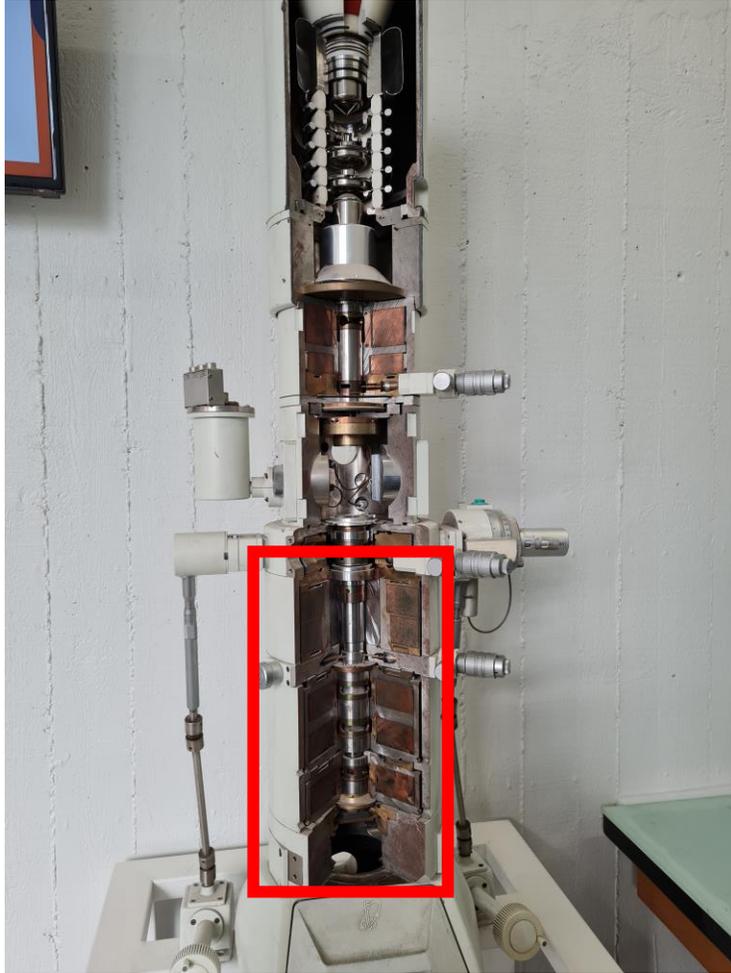

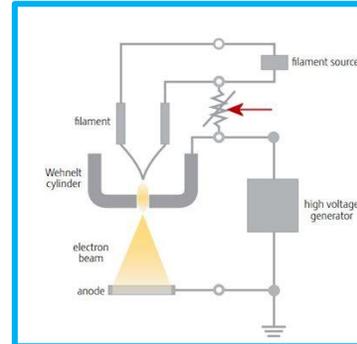

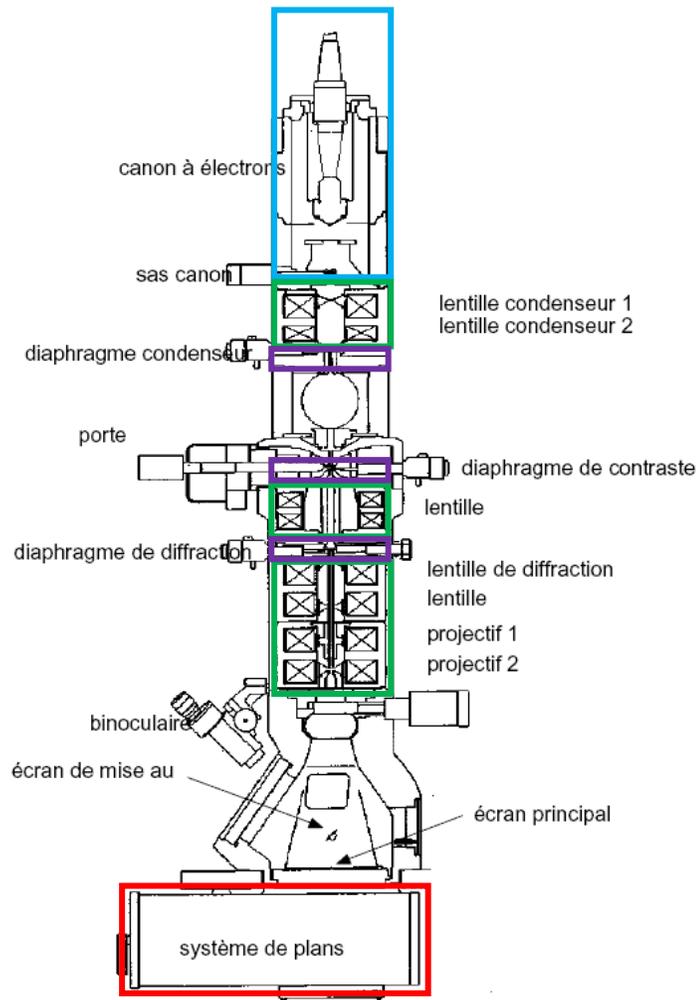

Mise en forme et positionnement du faisceau

Zone échantillon

Eléments constitutifs : les lentilles de grandissement

Canon à Electron
(80 à 300 kV)

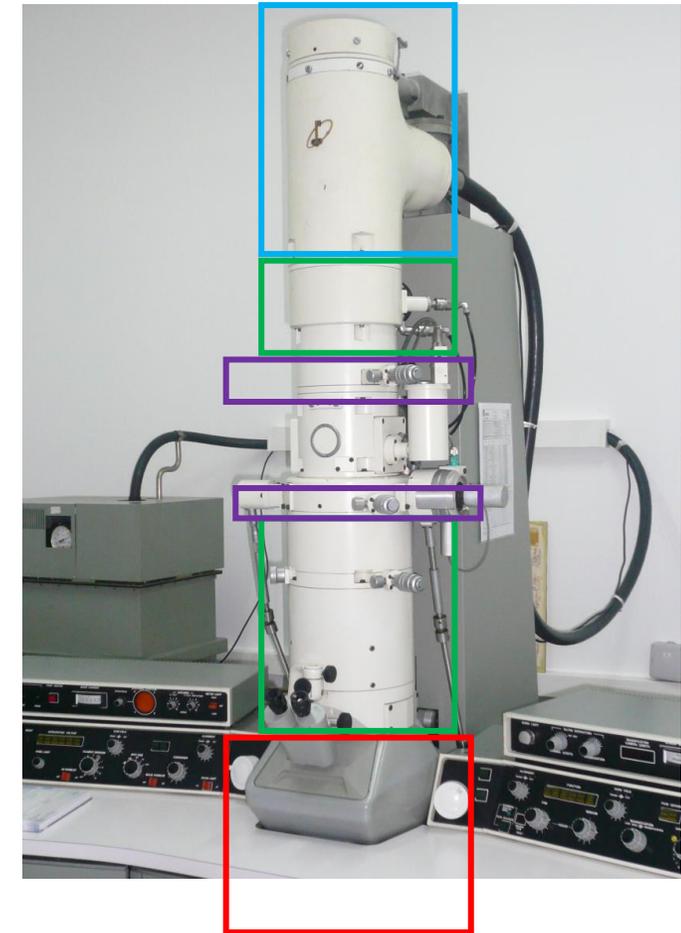

Lentilles
Electromagnétiques

Diaphragmes

Système d'acquisition
Caméra CCD

Actionneurs

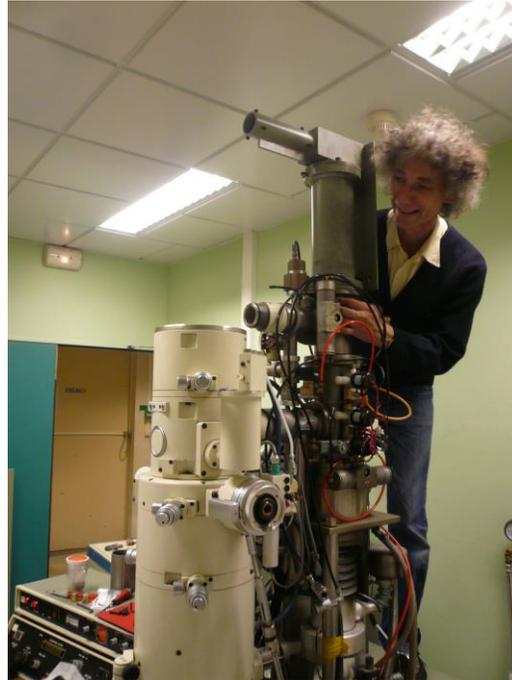

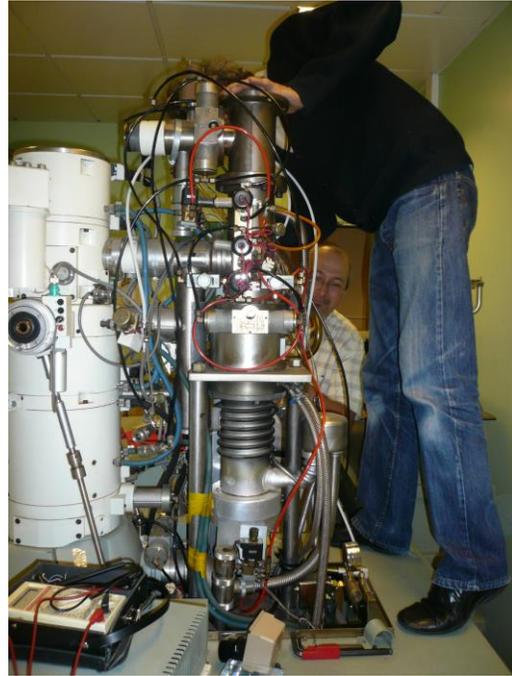

- Vide (primaire 10^{-2} Pa, secondaire 10^{-4} Pa)
- Vannes pneumatiques (air comprimé, Azote, 24V)
- Lentilles électromagnétiques (2 à 100V, eau)
- Cuve haute tension (-15V, 15V, 24V, 70V)
- Canon à électron (haute tension 80 à 300kV, SF₆)

Mesures

- Jauges Pinari et Penning
- Pression du réseau
- Courant, température
- Tension
- Courant, Pression

2009 – installation du 200CX

Veuillez trouver ci-joint un chèque € 1,00 N° 2 126 207 sur BNP PARIBAS
en règlement de : Microscope Electronique à Transmission

à rédiger exclusivement en euros
